

Algorithm for User Feedback

Step 1: Create User Feedback spring starter project

Step 2: Import necessary dependency in pom.xml

Step 3: Apply Db configuration in application.properties

Step 4: Create Pojo class (Feedback.java)

Step 5: Create Repo interface extend JpaRepository (FeedbackRepo.java)

Step 6: Create Service class (FeedbackService.java)

Step 7: Create Controller class (FeedbackController.java)

Step 8: Input using any of the rest API (I used Postman API)
